

This week I want you to think about shape! Shapes can have lots of edges or lots of curves. Shapes are in something that you are focused on, but can also be part of the space around the person or object you see. Spend some time looking for and thinking about shapes this week:

1. Find or take a photograph of a place/object that uses shape in a way you find interesting.
2. Make a drawing but only using groups of one shape that you really like making.
3. Take someone else's drawing or photo (or your own), and, using a colored pencil, find the shapes that make up that drawing or photo.

Have fun! And bring what you make to class next time!
